

Mounting a BSW RE27POP Pop Filter to the RØDE PODCASTER Microphone

The BSW RE27POP filter, originally designed for the Electro-Voice RE27 microphone, works great with the RØde Podcaster. However, it mounts in a different position than you would on an RE27.

To correctly affix the RE27POP to the Podcaster, slide the band over the microphone until it stops in front of the microphone casing as shown in the diagram and screw tight.
